

Our focus is all-natural products for
livestock, pets and wildlife.

Our Story

Timber Hills Lake Ranch, an outdoor paradise in Southeast Kansas, is where our work began. The result is a partnership with Denis Brincombe Group, U K that offers World-Unique technology, an all-natural tick, fly and mosquito deterrent.

POPs Available From ThinkAnimals

THiNK EQUINE Liquid

All-natural fly & tick deterrent

ECTOGON-284

Natural Ecto-Parasite Repellent

Reduces fly, tick, midge and lice nuisance

Anti-inflammatory Properties

Helps reduce skin irritation

Skin Support

Supports healing and promotes hair re-growth

Features and Benefits

Contains *Ectogon 284*

Patented polysulfide technology that contains key ingredients [volatile compounds] that safely alter a animal's basic physiology to diminish the attraction of flies, ticks and other blood seeking parasites

Helps improve skin integrity

The skin promoting properties such as Zinc encourage healthy hair regrowth & promotes healthy skin condition

All-natural ingredients

There is no build up or risk of anti-microbial resistance

Over 15 years of R&D

To provide an effective and natural solution that has given, tried and tested results. Provides ALL-OVER protection

Suitability

Equine

Cattle

Deer

Goat

Feeding Rate:

25ml per horse / day

20ml for smaller horses or ponies / day

Sizes Available

1 Liter / 2.5lbs

Liquid Feed

THiNK TICK TUB

ALL NATURAL TICK & FLY DETERRENT

A feed for all categories of lactating & growing cattle, deer, & equine free choice complementary mineral feed

- Durable in hot sun or heavy rain
- Concentrated to facilitate low daily intake
- Cost Effective
- Contains Iodine, Cobalt, Copper, Manganese, Zinc and Selenium
- Delivers Vitamin A, D3 and E
- Another vehicle for Delivery of Ectogon-284

PST 22 Polysulfide Technology Differentiates From Others in The Market

Harnessed in the correct manner, using patented technology, polysulfide's are a natural and exceptionally powerful extraction from the plant world, which are often referred to as "nature's strongest defense." Mild processing of plant extracts containing allicin (Thiosulphinates) produces a group of reduced organo-sulphur molecules with a set blueprint of Sulphur chain lengths and mixtures of methyl and allyl functional groups at the end of the Sulphur chains. Brinicombe production units can duplicate the same finger-print time and again.

The biological activity, mostly diallyl polysulfide, impacts the target parasites quite effectively.

This is World-Unique Technology!!
